

DSAPPS Super-Secure Shredded Cloud Drive

Patent pending encryption, shredding and secure cloud storage multiplier technology eliminates hacking and insider threats. Controlled 100% from within enterprise firewalls..

Supports Clouds offered by AMAZON, BOX, GOOGLE, IBM, MICROSOFT, SAP, RACKSPACE

Features:

- Store files and documents in public clouds, shredded and encrypted with maximum security.
- Encryption and shredding keys are controlled 100% by user enterprise personnel from within secure firewalls
- Secures data at rest and in motion by encrypting, shredding and randomized distribution across cloud.
- Secure storage multiplier benefits. Small quantity of meta data safeguards terabytes of enterprise data
- Significant return on investment. Uses less expensive public cloud, eliminates resource intensive private clouds

Benefits

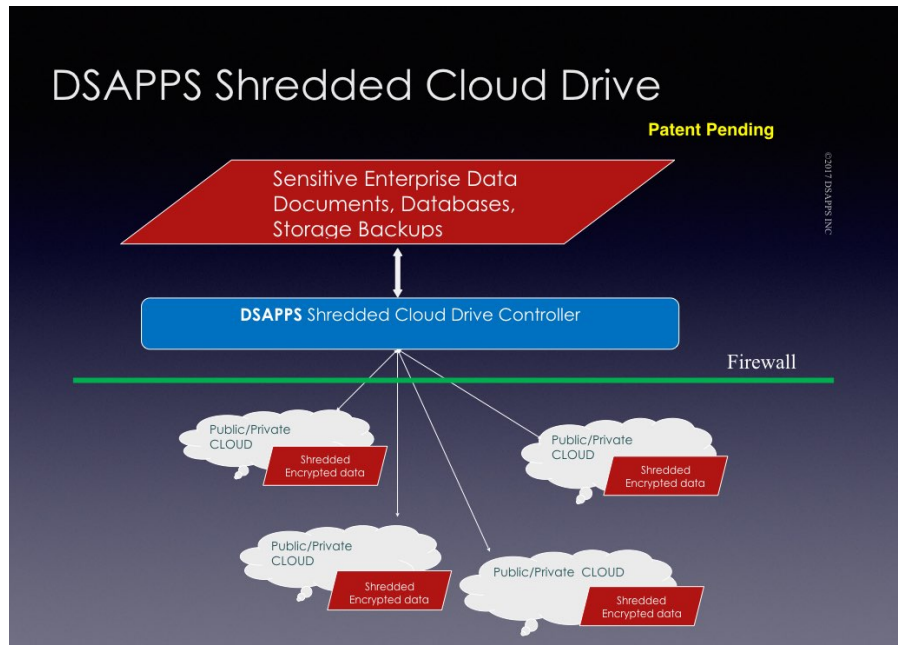

Data super-secured via encryption and shredding.

Users control data security from within firewalls.

Multiply storage security. Small amount of secured meta data secures vast amounts of enterprise data.

Significant cost savings and ROI. Automation eliminates costly resources.

Meet HIPAA, PCI/DSS etc. Government data security regulatory mandates

Optional data security management process allows team tracking, abnormality access detection and alerting
